All-season universal gas

DOMEX

- For camping kitchens
- For gas lamps
- For heating
- For grilling

Universal gas is a high-quality gas in a disposable aerosol cylinder under pressure. Provides a stable flame of the highest quality. Butane has reduced steam pressure at equivalent temperatures and is suitable for indoor and outdoor applications, easy to use in the ignition system, with a convenient inlet valve for the gas burner and a convenient adapter for installation in the gas canister. Suitable for burner welding, jewelry welding, cooking. Flash point (ignition) - 60°C. The temperature of use is from -20°C to + 40°C.

USAGE

Welding burner; jewellery welding; portable derivative ovens; sanitary works; heating; soft soldering; outdoor grills; fishing; portable heaters; gas-fired heaters; in mobile cafeterias.

METHOD OF APPLICATION

Use the cylinder in accordance with the instructions for operating gas appliances at a temperature from -20°C to +40°C. The cap must be removed before use.

ATTENTION

Lightly flammable gas. Contains gas under pressure – during heating may explode. Can cause drowsiness and dizziness. The cylinder cannot be refueled! For single use only.
